

Technology Introduction

Common knowledge shows that (TOPIC) is one of the prime providers of ease and comfort to people; however, not long ago, it caused and heated arguments among many opposing views. While many are in the position that (TOPIC) is far the best invention of the century, others say that the disadvantages behind it should not be ignored. Personally, I agree with the former/latter contention, and my reasons are as follows: (Opinion one) and (Opinion two).

Conclusion (agreed)

Subsequent to mulling over this query, I have finally come to grasp that no matter how many complaints people have on this humble (TOPIC), we can still say that it is by far the best thing man has ever invented. However, everything has two sides, and in order for the disadvantages not to prevail, we should exercise caution and moderation. As we all know, too much of anything is bad for us.

Nowadays we are producing more and more rubbish. Why do you think this is happening? What can government do to help reduce the amount of rubbish

Introduction

(TOPIC) is the focal point of most deliberations in modern society, and any argument or dispute about it would indeed smack into headlines. Regarding this issue, some people believe that there is no need to reduce the amount of waste. This is because they think humans are the most important and the environment is just a means for humans to live comfortably. while others think that PEOPLE should reduce waste, **and I think the government should make efforts to do that.** Personally, I agree with the latter contention, and my reasons are as follows: The government should create and distribute national guidelines for waste reduction and the government should create a **benefit system(beneficial system/systems that are beneficial)** for eco-friendly companies so that companies can make products that are beneficial to the environment.

Body1

The initial motive that is exceptionally evident is that the demands of (topic). To elaborate. In addition.

Body2

This event should be well taken into consideration, as to how to tackle this matter in question; the populace put forth assorted insinuations. The most vital proposal is.

Conclusion

Without going in circles, this disconcerting matter can be blamed on numerous aspects, however, I am sure that only if the government and the populace work hand in hand can we get to the bottom of it.

1. hook (어그로)
2. Issue making
3. some people believe... while others believe...
4. 나는 어느 편이고 이유는 이러이러하다

1. government should make guidelines.

process the waste

1. 내 의견을 paraphrase
2. 의견을 구체화 (moreover, however)
3. example (바로 전문장에 대한 예시)

guidelines should be made(distributed) by the government. To be specific, almost people don't know how to reduce the trash specifically, thus, if the government

만약 정부가 ~~~~ 지침 발표 사람들이 더 쉽게 실천 할수있을것이다

There are lot of wastes being thrown out because there are no specific guidelines to recycle the trash. Thus, the government should distribute some rules regarding it so that people can easily make some actions to better process their waste.

upcycling

beneficial systems for the companies

enacted -> new law making

the government should give benefits to eco-friendly companies.

to be specific, if the government rewards companies which are ecofriendly, they would give effort to reduce the waste to receive the benefit. Moreover, when they do this, it is helpful to improve their image.
